

Carbon front mudguard

Our front fender is bigger at the rear end to reduce spread water and dirt at the engine. Our bigger carbon fiber engine guard (MSU.016.GS12L.K) also reduces the dirt. You will find less dirt on the front of the engine with this bigger front fender and you can also combine it with the bigger carbon fiber engine guard.

Weight only circa 260 grams!

The front fender for the BMW R 1200 GS (LC) & Adv. (LC) in carbon fiber is a direct replacement for the original component.

The mudguards were developed and tested with standard road tires.

Tires with very high edges or extremely knobby tires can cause impairments.

The mudguards are not suitable for off-road use.

Art-Nr.: KVO.003.GS12L.K
