

GS911 wifi Enthusiast Diagnostic Equipment

The ideal diagnostic tool for workshop and travel! The GS-911 wifi Enthusiast enables performing endless servicing and diagnostic tasks, deleting the error memories, reading out important data from the various control devices and set the service date on many BMW motorcycles. The testing unit is small and lightweight enough to be taken on all travels without difficulty and is always at the ready in case of breakdowns and error messages even without connection to a 220V mains.

You need only the GS-911, a Windows or Mac PC, or a mobile phone or tablet PC to get going! The necessary software can be downloaded free of charge or you can access it via web browser and the device can be registered easily via the internet.

The GS-911 can be used on the road, at home, or in the workshop. The PC software offers even more options than the browser version for mobile devices when on the road!

The Enthusiast version allows work on ten different motorcycles. Further information on how to use the testing device and a host of tips and instructions are available on the manufacturer's site <http://www.hexcode.co.za/>.

The software and user manual is available in German and English language!

WEEE register number: DE 46934385

Attention: Once the device has been put into operation, it is excluded from being returned!

Fits for motorcycle models until construction year 2016 (round plug).

ATTENTION: For BMW motorcycle models since construction year 2017 with EU4 (OBD II, angular plug) you need an adapter cable (part number 80213) in order to connect the diagnostic tool with the motorcycle!

Fits for:

R1200GS LC (K50)

R1200GS Adv LC (K51)

R1200RT LC (K52)
