

Handlebar deflector

9397W

This handlebar deflector protects the driver against strong airflow by deviating the air away from the body and by offering an improved aerodynamic protection. Thus, signs of fatigue are reduced and the shoulder area is relieved.

Typically, the handlebar deflectors cannot be used in combination with the GIVI air deflectors!
This combination is only possible using 2 screws M5x35 (for the common mounting point).

Install Instruction

Also referred to as spoiler, add-on spoiler.
