

Examples for seat conversion

Beispielbild /
Example picture

By default, we use non-slip black synthetic leather and black stitching for the seat conversion. However, it is also possible to customize the appearance of the seat at an additional cost.

Optional seat conversion options:

- other type of synthetic leather
- another leather color
- stitching
- paint letters or numbers on the seat, for example "XR"
- different colored seams

Prices and other example images can be found here: [Examples for seat conversion](#)

Please let us know by email which extras you would like for your seat conversion.

We will then check whether the seat conversion is possible as desired and inform you of the total price.
